INTRODUCTION

- Only 64% Bangladeshi urban dwellers wears mask.
- About 75% reduction in transmission of COVID-19 if masks are worn.
- Difficult to make wearing mask a habit.
- Fail to enforce mask wearing.
- Creates unsafe environment.

PROPOSED SYSTEM

COMPONENTS

Arduino Nano

IR sensor

LEDs

LCD display (16x2)

CIRCUIT ANALYSIS

LIVE DEMO

DRAWBACKS

- AI can only handle a limited number of situations.
- Old phones may not be able to handle running the system.

FUTURE SCOPE

Train the AI model with bigger dataset.

Introduce more classification classes to AI.

System can used to determine % of mask wearers.

Statistics can be sent to authorities via IoT.

CONCLUSION

Reduces risk of spreading the COVID-19.

Help create the habit of mask-wearing among the masses.

Ensure a safe environment.

System is eco-friendly and cheap.

THANK
YOU!
